
LAW OFFICE OF SHAWN LEE

Memorandum of Law on July 26, 2026

Families who seek out divorce, separation and custody agreements in Virtual Court are often forced to confront a series of Social Media Companies who have a vested financial interest in the Court's Orders.

social media

noun

plural in form but singular or plural in construction

forms of electronic communication (such as websites for social networking and microblogging) through which users create online communities to share information, ideas, personal messages, and other content (such as videos)

1. Tele-Lawyers - Legal Social Media

1.1. Lawyers often pay for Case Management Software. Popular platforms include Clio, MyCase, Checkbox, Caret, LexisNexis, Thomson Reuters.

- 1.2.All of these Case Management Software companies cost money, all are classified as Social Media, and they all enable Remote Work by lawyers and their staff.
- 1.3.There is zero research into the merits and risk of online digital case management software for Remote Working lawyers and Remote Working Staff versus paper files with lawyers who work in person.
- 1.4.Remote Work can increase the risk of legal error.
- 1.5.Remote Work can lead to financial conflicts of interest if Lawyers and Staff use Remote Work to cover up errors from Remote Work.
- 1.6.Remote Work can lead to sanctions if a lawyer files information they did not verify was true and accurate.

2. Tele-Doctors - Medical Social Media

- 2.1.Each Child and Adult has a Patient Portal for each healthcare provider. For children with complex medical issues, there could be upwards of 5 Patient Portals.
- 2.2.Some of these Patient Portals only allow one parent to control the portal, while others allow for two parents to have separate accounts overseeing a minor child.
- 2.3.If only one parent gets the Patient Portal, then the other parent is deprived of the ability to provide information on the accuracy of the primary parent's reporting of signs and symptoms of healthcare conditions.

- 2.4.If both parents have access to Patient Portals, then medical care entities have to figure out what is true and accurate based on what could be wildly disparate reports of medical issues for the minor child.
- 2.5.All of which increases the risk of medical error for the child and legal error for the case.
- 2.6.Remote Work and TeleMedicine can result in financial conflicts of interest if medical entities use Remote Work, or terminate Patient Portals, in order to cover up errors from TeleMedicine.
- 2.7.TeleMedicine can be weaponized with medical entities being paid to issue wildly inaccurate information, for pay, which is costly and inherently risky to rebut in a trial.
- 2.8.TeleMedicine can also be weaponized when Parenting Application communications are sent to TeleMedicine providers resulting in Tele-Doctors opining on Social Media communications without regard to the truth or accuracy of the information.
- 2.9.TeleMedicine has been called the front line of Health Care Fraud by the DOJ.

3. Tele-Court Portals - Legal Social Media

- 3.1.The Courts are overwhelmingly using E-filing systems. In Missouri these are www.courts.mo.gov. In Kansas you file to <https://filer.kscourts.org/portal/>. Federally you file to www.pacer.gov.
- 3.2.In addition, many Family Court Dockets are now run purely off of Cisco Webex and Zoom.

3.3.Zoom hearings based on electronic filings from Remote Working Lawyers who are using Remote Working Tele-Doctors opining on Court Ordered Panels does increase the risk of legal error.

3.4.This system did not exist prior to 2020, and was not the subject of legislative debate, but entirely created by the opinions of Judges that they have the Power to administer their own courtrooms as they see fit.

4. Tele-Prosecutors - Legal Social Media

4.1.Prosecuting Attorney offices all over the Country have Remote Working Staff, Remote Working Prosecutors, and appear remotely.

4.2.This means they may not necessarily be providing the diligence, oversight, research and competence when reviewing charging decisions.

4.3.This means cases could be brought based entirely off of false information circulating in TeleMedicine, TeleCourt and Parenting Portals, or, in the alternative, meritorious cases are not brought.

5. Tele-Social Workers - Legal and Medical Social Media

5.1.The Missouri and Kansas Children's Abuse and Neglect Administrations do work remotely, do have portal systems, and do investigate and supervise remotely.

5.2.You effectively have Remote Workers investigating other Remote Workers supervised by Remote Workers.

6. Tele-Police - Legal Social Media

6.1. The predominate Portal systems for law enforcement are axon.com and evidence.com.

Both are Social Media Applications which allow law enforcement to login, post photographs and videos, communicate and cooperate.

6.2. This also allows wildly inaccurate and biased information to be circulated resulting in situations where Police charge the wrong person, or fail to investigate a crime entirely.

6.3. This also detracts from law enforcement developing real relationships with their co-workers, suspects, witnesses and prosecutors.

7. Tele-Schools - Educational Social Media

7.1. Every School now has a portal system for the students and for the parents.

7.2. Much of the information in controversy in a Family Court comes from school records.

These can be attendance records, health records, academic records, communications, etc...

As a result, parents are often left spending copious amounts of time trying to refute false and misleading information circulating on upwards of 10 portal systems, while simultaneously being forced to pay for the portal systems. In addition, Parents have to pay lawyers and doctors to review the portal systems, and rebut the false information circulated in the portal systems.

What this creates is an opportunity for Conspiracy to Commit Wire Fraud by licensed entities who deliberately, recklessly or negligently disseminate false information online.
